

INTERNATIONAL SEARCH REPORT

International application No.
PCT/GB2007/000694

Box II Observations where certain claims were found unsearchable (Continuation of item 2 of first sheet)

This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☐ Claims Nos.:
because they relate to subject matter not required to be searched by this Authority, namely:
2. ☐ Claims Nos.:
because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:
3. ☐ Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box III Observations where unity of invention is lacking (Continuation of item 3 of first sheet)

This International Searching Authority found multiple inventions in this International application, as follows:

see additional sheet

1. ☐ As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:
4. ☒ No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

1, 9-16*, 18* (when dependant on clm 1)

Remark on Protest

- ☐ The additional search fees were accompanied by the applicant's protest.
- ☐ No protest accompanied the payment of additional search fees.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

This International Searching Authority found multiple (groups of) inventions in this international application, as follows:

1. claims: 1,9-16*,18 *: when dependent on claim 1

A method of pulling additional information relating to a call by the call recipient. A call is set up by using a storage that maintains the addresses of potential call recipients as well as additional data. The provisioning of additional information to a call recipient is achieved in a pull procedure. To this end the recipient's terminal performs an address translation in order to query the storage for transmission of the additional data.

2. claims: 2,9-16*,19 *: when dependent on claim 2

A method of pushing additional information relating to a call towards the call recipient. When setting up the call by using a storage of destination addresses, additional call related information is sent to a data address of the destination telephone. The latter one must be capable to correlate the call and the received additional data.

3. claims: 3-16*,20 *: when dependent on claim 3

A method of updating an entry in a storage of addresses. When making a call by a user to a destination station, an address of the user is conveyed. Based on this user address the destination station sends a message containing an address of the destination station, which is then inserted into an entry of the address storage of the calling user. In subsequent calls made by the user to that destination, the previously received destination address is used.

4. claims: 17,21

A method of conveying an identifier in combination with a call. When setting up a call by using an address storage, an identifier stored in that storage is determined, which is not the address of the calling party's communication equipment. Together with the call this identifier is transmitted to the call destination.
